administering a pharmaceutical composition comprising interleukin (IL)-13 antagonist. The protein of the invention is useful for treating tissue fibrosis resulting from infection with Schistosoma or from healing of a wound which is a surgical incision, or inhibiting formation of tissue fibrosis which affects tissues such as liver, skin epidermis and endodermis, muscle, tendon, cartilage, cardiac tissue, pancreas, lung, uterine tissue, neural tissue,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    of various II-13 related conditions such as allergic conditions, nephrotic syndrome, thyroiditis, Grave's disease and cancer. The present sequence is human interleukin (II)-13 binding chain of II-13 receptor (II-13b). II-13bc protein is used to potentiate the effects of II-13. This protein is also used to enhance macrophage activation and hence can be used in vaccination or treatment of mycobacterial or parasitic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       testis, ovary, adrenal gland, artery, vein, colon, small ir billary tract and gut. It is also used in the treatment or

In particular, the IL-13 antagonist is the IL-13 binding chain (IL-13bc; AAB29747, AAB29748) of the IL-13 receptor (IL-13R), or soluble fragments thereof. The method is useful for treating or inhibiting the formation of tissue fibrosis resulting from the healing of a wound, including a surgical incision wound, or from infection with schiscosoma. The method may be used to treat fibrosis in a variety of tissues, particularly liver tissue, but also skin epidermis, skin

The invention relates to the use of a nucleic acid or vector CC encoding a polypeptide with at least 70% identity to interleukin-13 CC receptor alpha-2 chain (IL-13R alpha-2; AAM49201) for rendering a CC cancer cell sensitive to IL-3R-targeted immunoconjugates or for CC inhibiting the growth of a cancer cell. In some cancers that exhibit CC little or no expression of IL-13R transfection with the IL-13R CC alpha-2 chain is sufficient to inhibit growth, while in CC other such cancers, the introduction of the IL-13R alpha-2 chain enables immunoconjugates (such as immunotoxins) that comprise IL-13 to be CC in the inhibition or death of cells in the invention also results CC in the inhibition or death of cells in the tumour which were not CC in the inhibition of at least some of the cells of a tumour with the IL-13R alpha-2 chain causes the secretion of a cytokine or other factor that CC alpha-2 chain causes the secretion of a cytokine or other factor that CC alpha-2 chain activated to kill the tumour cells. Because a nucleic acid encoding just the IL-13R alpha-2 chains of the entire IL-13R, the CC choice of vectors that can be used for transfection. A wide range of CC cancers can be treated using the methods of the invention, including CC brain cancer, head and neck cancer (preferably sequenous cell carcinoma), breast cancer, postate cancer, testicular cancer, skin cancer, cervical blader cancer, crevical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Use of nucleic acid or vector encoding interleukin-13 receptor alpha chain polypeptide that binds IL-13, for sensitizing a cancer cell e.g brain cancer cell to effector molecule or inhibiting growth of cancer
                                                                                                                   bladder cancer, prostate cancer, testicular cancer, skin cancer, cancer, uterine cancer, or sarcoma. The present sequence represent the human IL-13R alpha-2 chain which is specifically claimed for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           mesothelioma; pancreatic; colon; gastric; ovarian; renal; bladder;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ρ
shares homology with cytokine receptors and was isolated from a human testis cDNA library. The resulting polypeptide is a receptor for cytokines (particularly interleukin-13) and is expressed on the surface of testicular cells, probably being involved in spermatogenesis. It can be used to detect ligands that promote proliferation and/or

Antagonists of this receptor may be used to characterise ligand-receptor interactions and as male-specific contraceptives. By blocking the action of IL-13, receptor antagonists and ligand-binding this receptor can also be used to modulate immune function, e.g. in allergy and astima, as a diagnostic to determine circulating levels of ligand and also to isolate and purify ligands. Antibodies can be used to assay circulating receptor (an abnormal level may be indicative of disease such as cancer), for labelling cells that express the receptor,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       and/or differentiation of such cells in cultures and may also be used to treat infertility. Antagonists of this receptor may be used to characterise ligand-receptor interactions and as male-specific contraceptives. By blocking the action of II-13, receptor antagonists a ligand-binding this receptor can also be used to modulate immune function, e.g. in allergy and asthma, as a diagnostic to determine circulating levels of ligand and also to isolate and purify ligands. Antibodies can be used to assay circulating receptor (an abnormal level may be indicative of disease such as cancer), for labelling cells that express the receptor, and therapeutically as antagonist.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC The invention relates to an isolated soluble zalphall cytokine receptor CC polypeptide and their cDNA molecules. Zalpha proteins are useful for CC inhibiting or antagonising the ligand activity-induced proliferation of CC haematopoletic cells and haematopoletic cell progenitors preferably CC lymphoid cells which are natural killer cells or cytotoxic T cells. CC Zalpha is useful for treating immune and inflammatory disorders, for CC reducing proliferation of neoplastic B or T cells, for suppressing an CC immune response in a mammal exposed to an antigen or pathogen. Zalpha is CC useful for treating diseases that require immune regulation including CC useful for treating diseases that require immune regulation including CC useful for treating diseases that require immune regulation including CC useful gravis, systemic lupus erythematosus (SLE) and diabetes; CC myasthenia gravis, systemic lupus erythematosus (SLE) and diabetes; CC asphis, viral infection (dengue virus infection) and cancer. The present CC sepsis, viral infection (dengue virus infection) and cancer. The present CC sepsis, viral infection (dengue virus infection) and cancer. The present CC sepsis, viral infection (dengue virus infection) and cancer. The present CC sepsis viral infection (dengue virus infection) and cancer.                                                                                                                                                                                                                        The II-13 binding protein and related therapeutic molecules can be used in the antagonism of at least one II-13 activity. They can be used for treating II-13 mediated conditions such as certain allergic conditions such as asthma or to inactivate locally administered II-13 after II-13 treatment. The products can also be used as diagnostic agents, e.g. for detecting autoimmune diseases. The antibodies can also be used for immunotherapy and may also be used as a diagnostic tool.
